

Updating **DUKE** to a new version

Takes about a minute. Works for every DUKE pack (Transitions and Drop-Ins).

1 Download the newest version. Paid packs: open your order page (the link from your purchase). Free packs: dukefx.netlify.app.

2 Quit DaVinci Resolve completely.

3 Copy the new .drfx file into DaVinci's Templates folder and choose **Replace Mac** (in Finder: Go > Go to Folder, paste, Return)

`~/Library/Application Support/Blackmagic Design/DaVinci Resolve/Fusion/Templates`

Windows (paste into the File Explorer address bar)

`%APPDATA%\Blackmagic Design\DaVinci Resolve\Support\Fusion\Templates`

4 Open DaVinci Resolve. Names stay the same, so nothing shows up twice.

Transitions already on your timelines keep the version they had. Drag a transition on again to get the new one. Prefer a clean start? Delete the old DUKE .drfx files first, then copy the new ones in.

What is new: the Curve tab

Every DUKE transition now has two tabs in the Inspector: **Controls** (the usual sliders) and **Curve**.

- **Original DUKE** (default): the transition exactly as designed.
- **Ease Preset**: pick an Ease In and Ease Out. Expo = fast snap, Back = overshoot, plus Bounce, Elastic and more.
- **Custom Curve**: drag the points on the graph to shape the motion. The graph is always visible, and the reset arrow puts it back.

Need help? Email bobby@quantosmedia.com with which pack, your Resolve version and a screenshot. DUKE is a product of Quantos Media.
